Brother Jerome – Developers: Peter Cole & Benji Adams

<http://www.be9.net/BJ/>

1) Peter Cole (is based in Swansea, UK)

I have had an interest in Artificial Intelligence ever since I discovered a copy of Eliza (in PET Basic,) printed in an early computer magazine, and laboriously typed it into one of the PET32s our school had in the early 1980s. I was immediately enthralled!

Although my education subsequently veered away from a scientific path (I read Politics at University,) I never forgot that strange joy of chatting with that first Eliza. I now know it to be what the Japanese call "sonzai-kan" - the instinctive sensing, at an almost visceral level, of an apparent kindred consciousness in an entity with which you are interacting.

Over the years I have programmed increasingly complex variants of her (and some "him"s, and at least one "it"), in a variety of languages, on machines from my first ZX-Spectrum to my current Pentium. More recently I discovered the Personality Forge, thought I'd have a look, and quickly became hooked.

The homebrewed offspring of Eliza now gather digital dust in a quiet corner of one of my more undisturbed hard drives, but Brother Jerome has taken up the baton, and continues the race.

Extra information: “Peter participated with [Hanson Robotics](#) to provide the artificial intelligence personality for a walking, talking, expressive android with the likeness and personality of Albert Einstein”

See: <http://www.personalityforge.com/nextfest.php> and
http://www.be9.net/BJ/Einstein/smithsonian_einstein.htm

Peter says: “I adapted Brother Jerome into Einstein (at rather short notice,) so he'd talk more about relativity, and less about theology :) and it ran on the same Forge server we're using with Brother Jerome, The Nextfest Einstein (an earlier incarnation with a better body but not much mind) - the Cooper-Hewitt Einstein was only robotic from the waist up (too much danger of trampling small children in a museum environment, so we bolted it to a wall!) The photos in the second link are of the actual installation - same head, but a more human "clothed" body. It had TTS and voice recognition, and enough of a visual system to track people's faces. “

2) Benji Adams, US

Benji Adams lives in Atlanta, GA in the US. His interest in AI began in 1990 when he started working on alternate personalities for an early Eliza application. In 2001, he began work on The Personality Forge, an online artificial intelligence platform that would within a few short years incorporate Natural Language Processing, Case-Based Reasoning, sentence structure comprehension, word meaning and relationships, memories, gossip, emotions, an expressive Flash interface, and an AI scripting language called AIScript. Today the Personality Forge is home to 62,000 bot developers and AI personalities.
